ABOUT ME

I am a highly motivated, detail-oriented full-stack software developer who made the transition from graphic design. With six years of previous industry experience, I bring with me strong creative and analytical problem-solving skills. I understand the importance of communication and teamwork, and I hope to leverage that experience in my new career. I am proficient in JavaScript and React and have experience with Python and Django REST frameworks for web APIs. I am seeking a front-end or full-stack position; where I can continue to learn and grow personally and as a developer.

INDIVIDUAL PROJECTS

BARKBOOK - FRONT-END CAPSTONE

Barkbook helps find a playmate for your pet by allowing the user to search a specific neighborhood of Davidson County. The user can then connect with another user via direct message to set up a play date without leaving the house. Fido finds a mate that matches their size and energy and you meet new people.

- Full CRUD React application utilizing React hooks to manage state
- JSON server used as local database
- Styled with CSS3
- Cloudinary API used for image uploading

use demo@barkbook.com for quick login

STRESSLESS - BACK-END CAPSTONE

StressLess is a full-stack application aimed at helping high-performing individuals tackle their stress by creating habits that aid in self-care. The app will help bring more awareness to prioritizing themselves, rather than focusing on the ever-evolving demands around them. A community of like-minded individuals will also be in their reach for support and accountability.

Tech Stack: JavaScript, React, Python, Django, SQLite3
🌐 coming soon!
